7pm	Richard Ball Steve Mifsud	

Figure 1: Schematic representation of the experimental design. The figure shows 12 horizontal bars representing different time points: 10am (6 bars) and 12.30pm (6 bars). Each bar is divided into three segments: a green segment (left), a yellow segment (middle), and a red segment (right). The green segment represents the 'Control' group, the yellow segment represents the 'Treatment' group, and the red segment represents the 'Control' group. The bars are arranged in a grid with 4 rows and 3 columns. The first two columns represent the 'Control' group, and the third column represents the 'Treatment' group. The red segment is only present in the 'Control' group bars.
